

Power Automate: Workflows for Everyone Made Simple

The whole idea is to get your computer working for you! Replace manual tasks and processes with Power Automate.

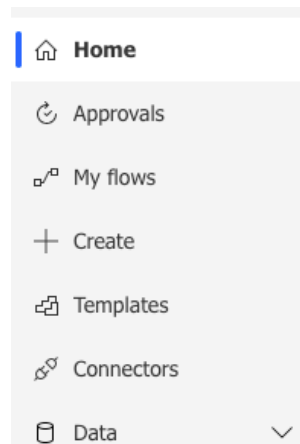

What Can Power Automate Do for You?

- Improve your time management
- Automate a business process without coding
- Inform teams when important Power BI data alerts are triggered
- Keep all your documents in one place
- Replace a manual approval process
- Schedule data to move between systems
- Automate the creating of lists and libraries

What Services Can You Connect to Power Automate?

- You can connect over 100 different programs!
- Including SharePoint, OneDrive, Trello, X (Twitter), Facebook, Mailchimp, Customer APIs

Components of Power Automate

1. Flow Types

Power Automate offers automated, instant, scheduled, and business process flows, each addressing different automation needs.

2. Templates

Users can access pre-built templates in Power Automate to quickly create customized workflows for common tasks.

3. Triggers

Events or conditions, such as receiving an email or updating a record, initiate the execution of a flow.

4. Actions

Steps within a workflow, like sending emails or updating records, are represented by actions.

5. Conditions/Controls

Users can define logical branching and decision-making in workflows based on specified conditions.

6. Connectors

Integrations with external services and platforms enable seamless communication between Power Automate and other applications, databases, and APIs.
